Statement of Environmental Policy

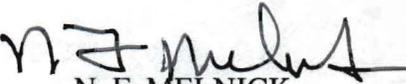

Our Mission at Fleet Readiness Center Southwest is to “Provide top quality products and services at the best value in the fastest time”. While accomplishing our mission, we are obligated to be environmental stewards.

Our Vision is to be “the leader in innovative aviation maintenance solutions, committed to customer, workforce, and community.” Vigilant protection of our environment must be an essential element in delivering cost-wise readiness to the Warfighter.

Military aerospace is a challenging, competitive work environment; and military Maintenance, Repair and Overhaul (MRO) work is even more demanding. To fulfill this responsibility to the Warfighter, our co-workers and our neighbors we are committed to:

- Continual improvement of our environment performance and proactive adherence to ISO 14001
- Following all applicable environmental laws, regulations, permit, and other requirements
- Proactive prevention of pollution
- Designing industrial processes to minimize environmental impacts within the limits of technology and economics

It is the responsibility of everyone to remain aware of the environment in every job at all times. I depend on each member of the Fleet Readiness Center Southwest to minimize the use of hazardous materials; employ pollution control systems; limit consumption of natural resources and conserve energy. If you encounter a situation that could harm the environment, follow the established procedures to immediately alert the proper authorities. If you have an idea that could improve the environment contact the Environmental Office. This policy shall be communicated to all employees, employees who work on behalf of FRCSW, customers and stakeholders.

N. F. MELNICK
Captain, U.S. Navy
Commanding Officer
