

**MOBILE FACILITY PROGRAM REVIEW
ACTION ITEM**

ACTION ITEM NO.: 3-94

DATE SUBMITTED: 04/16/2010

SUBMITTED BY: SSgt Jones

PROBLEM: Serialized Hoist, Slings and I beam trolley installations in mutiple avionic bench MF's, require inspections and preventive maintenance within prescribed intervals. The issue comes to when and what interval, and the proper procedures and guidelines that need to be taken to ensure safety of personnel and integrity of the equipment. As of right now there is no reference that specifically points out the requirements for integrity inspections on the specific hoist, slings, or I beam trolley installations that belong to these Mobile Facilities. They are a part of the MF configurations but they're no reference's in the MF MRC's for the said items. This has caused mass confusion and various interpratations due to not having specific procedures and guidelines into the proper inspections and preventive maintenance of said support equipment. The NA 17-1-114.1 manual does point out proper procedures for aircraft support equipment slings but none of the Mobile Facility hoist, slings or I beam trolley installations are specified in this manual.

RECOMMENDATION: Incorporate procedures and guidelines to identify proper intervals of inspections, preventive maintenance, documentation and identifications tags for the hoist, slings and I beam trolley installations that belong to the Mobile Facility Program.

STATUS:

ACTION AGENCY: Lakehurst
