

NAVY eLEARNING (NeL)

xApi, mobile, and Ready Relevant Learning

LMS-DL, known to Fleet users as Navy e-Learning (NeL), provides integrated delivery of training for the Naval Education and Training Command (NETC) in support of Manpower, Personnel, Training and Education (MPT&E) organizations. NeL is one of the largest distance learning environments in the world, with a comprehensive catalog of 12,500 distance learning course offerings, available 24/7 to 740,000 registered users and consists of a Learning Management System (LMS) that uses web-enabled technology to deliver self-paced electronic course materials. Through NeL integrations, training is offered within unclassified (NIPRnet), classified (SIPRnet), and onboard military vessels (Afloat).

NeL UPCOMING PILOTS

In an effort to stay current in ever-changing training delivery options, NeL is working on upcoming pilots that include:

- Learning Records Store (LRS) Pilot – Leveraging new technology of Experience Application Programming Interface (xAPI), the LRS is intended to meet increasing need for mobile/off-line delivery of content that can still report back to a centralized Learning Management System. It opens the window to what information can be captured from individual training events, tailored to requesting system needs.
- Offline and Mobile Content Delivery Pilot – Navy Mobile Training is making a splash and those mobile apps already available have been featured in many Navy social media sites and news outlets receiving positive reviews. Includes:
 - ▶ Domestic Violence Prevention
 - ▶ FMS Calculator
 - ▶ Uncle Sam’s OPSEC
 - ▶ New to the Navy
 - ▶ eDIVO
 - ▶ Navy Cool
 - ▶ Records Management GMT
 - ▶ PII GMT

The team continues to make positive strides toward process improvements and the development of new apps as well as liaison with product owners with current development for FY16 to include SBIR Mobile Recruiting and MPTe Mobile Application Toolbox.
- Ready Relevant Learning (RRL) aka Sailor 2025 – This effort is intended to provide the infrastructure and methods to ensure Sailors are able to reach training content when required; deliver training to Sailors “just in time” when they need it for sea tours; improve CNEC fit for all command/platforms as well as training efficiency in all phases of rate training – from accessions to master; permit more time on ship during Sailor’s initial contract by delaying front-loaded advance training not needed until later in a Sailor’s career; improve training quality and skill retention by delivering training in a modular contract through immersive and interactive learning capabilities; and establish an assessment system or measuring the impact of Individual Training on Fleet Readiness and future continuous process improvement.
