

Bravo Aircrew Tactical Team Trainer

EXHIBIT FACT SHEET

Bravo Aircrew Tactical Team Trainer

The Anti-Submarine Warfare (ASW) Virtual-at-Sea Training (VAST) Bravo Acoustic Tactical Team Trainer (BATTT) system is a networked, PC-based, deployable trainer designed to support integrated and coordinated ASW tactical training and enhance team decision making for Navy Seahawk SH-60B crews.

The current training system configuration is comprised of personal computers, with each representing a crew station (Pilot, Airborne Tactical Officer, Sensor Operator) and an Instructor/Operator Station. The system uses the same tactical software program employed by the SH-60B. The BATTT system's flexible design consists of a Tape Handling Package (THP) emulator,

enabling rapid upgrades to the BATTT tactical software program to match the latest versions used in the Fleet.

Whether at homeport or deployed, the ASW VAST BATTT will allow the entire ASW ship/aircrew team to train together synthetically, thereby augmenting and enhancing flight and steaming hours, and allowing the Warfighter to maintain increased tactical ASW proficiency.

BATTT systems provide Integrated Training Capability for air assets, and are Navy Continuous Training Environment (NCTE) compliant.
