FORCE FEEDBACK DEVICES

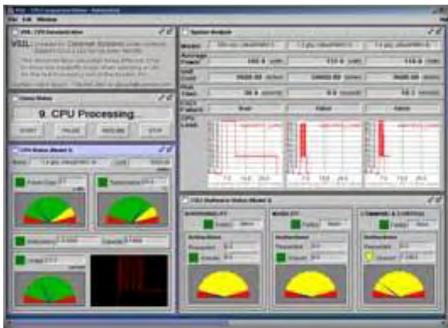

ATACS

MEDSTAR TELEMEDICAL SYSTEM

VSIL

OPENSKIES

SHIPBOARD WIRELESS MAINTENANCE ASSISTANT:

The U.S Navy required an application adaptable, handheld high-performance computing device, given reduced manpower:

- ❖ It had to be rugged and easy to use.
- ❖ It had to support data capture from diverse sources.
- ❖ It had to easily interface with existing applications and legacy environments.

Multiple Source Data and Information Capture.

Rapid High-Performance Data Processing.

Support for Legacy and PC-Standard Applications.

Flexible Form Factor and Hardware Design.

Cybernet's solution provides overwhelming price performance compared to other ruggedized platforms:

Designed specifically for the maintenance/logistics community
