Sources Sought Process Guidebook

NAVAL AIR SYSTEMS COMMAND
NAVAL AIR WARFARE CENTER / AIRCRAFT DIVISION

Guidebook Issued October 2008

The Sources Sought Process is a market research tool used by the Government to obtain information regarding industry's ability to provide products and services. This Sources Sought Process Guidebook was designed to assist NAVAIR and NAWC/AD Acquisition Professionals (including engineers, testers, and logisticians) in developing Sources Sought Technical Descriptions.

This Guidebook provides background information on the process and explains how the Sources Sought Process fits into the Acquisition Process as a whole. Additionally, it describes the process of developing and issuing a Sources Sought Technical Description in a section-by-section manner.

Please understand that this guide is to be used as a reference only. If questions arise, it is your responsibility to adhere to applicable regulations, instructions, or other sources for guidance.

Overview of Market Research

The Government is required to conduct market research in order to arrive at the "most suitable approach to acquiring, distributing, and supporting supplies and services." Federal Acquisition Regulation (FAR) Part 10 sets forth the policy guidance and the procedures for conducting market research (the FAR can be found at <http://farshe.hill.af.mil/>). Agencies must conduct market research appropriate to the circumstances "before developing new requirements documents for an acquisition by that agency; before soliciting offers for acquisitions with an estimated value in excess of \$100,000; before soliciting offers for acquisitions with an estimated value less than \$100,000 when adequate information is not available and the circumstances justify its cost; and before soliciting offers for acquisitions that could lead to a bundled contract."

The results of market research are used to determine which companies are in the marketplace to meet the agency's requirements and to determine if commercial items are suitable for off the shelf use or if commercial items could be modified to meet the agency's needs. According to FAR Part 10.002, the extent of market research will vary, depending on such factors as urgency, estimated dollar value, complexity, and past experience.

Once the Government defines its requirements, the procuring activity conducts market research to determine if commercial items or non-developmental items are available or could be modified to fulfill the Government's requirements. The activity conducting the market research should also consider other options such as the customary
